[Annex – GDP 2024Q2 \(ZIP – 143 kB\)](#)

### The Slovak economy kept its growth up to 2%, but it increased the slowest in the last year

In the second quarter, economic performance was mostly supported by domestic demand, which grew at a faster pace than at the beginning of the year after last year's declines. It was strengthened by the continuing higher rate of spending by households and the public sector. Exports and imports recorded faster growth, investment activity was the weakest in the last two years.

**Gross domestic product** (GDP) rose by 1.9% year-on-year (in constant prices, seasonally adjusted) in the second quarter of 2024, it was the slowest pace in the last four quarters. In the previous three quarters, economic performance increased at the level of 2%, and it was significantly above this limit even at the beginning of this year (by 2.7%). The volume of GDP at current prices increased by 6.5% year-on-year and reached EUR 32.4 billion. After seasonal adjustment, GDP increased by 0.4% quarter-on-quarter (compared to the 1st quarter of 2024) in real terms.
