Freight transport reached the highest volumes of goods in the last sixteen months, its performance increased by 17%

A significant year-on-year growth in freight transport in September 2023 was significantly supported by road transport with a dynamic increase in volumes of transported goods by up to 24%. Rail transport also rose by double digits. Positive development was also maintained in passenger transport, mainly public transport increased significantly. Although rail transport has still not approached the perspective pre-pandemic years, it still transported the highest number of passengers this year in September.

Enterprises that were registered in Slovakia transported a total of 21.2 million tons of goods in September 2023 within **freight transport**. The volumes of transported goods by road increased by almost a quarter year-on-year, and the rail transport also recorded an increase in transportation by 10.7%. For a long time, more than two-thirds of the transported tons of goods is made up of road transport. Both its components, public and non-public transport, showed a high year-on-year growth. Public road transport carried more goods year-on-year by almost 19%, non-public even by almost 30%. Only other transport recorded a decrease, lagging behind last year by 11.5%.

Freight transport (in mill. tons)
