Turnover in industry accelerated the rate of decline, growing significantly only in selected market services

June's turnover dropped in 3 out of 5 monthly monitored sectors of the economy, most significantly in industry. Similarly, it recorded an apparent decrease in construction, turnover in transportation and storage was only slightly lower than a year ago. Currently, turnover in selected market services maintain the most stable growth. They also continued increasing in information and communication activities.

Turnover in **industrial enterprises**¹⁾²⁾, the largest sector of the economy, decreased year-on-year by 9.2% (in constant prices) in June 2024, which was the second highest decrease this year. Among the 16 monitored sectors¹⁾, as many as 13 recorded lower turnover values.

June's turnover in **selected market services**²⁾ increased by 7.4% year-on-year, so they have been continuously maintaining positive figures for half a year.

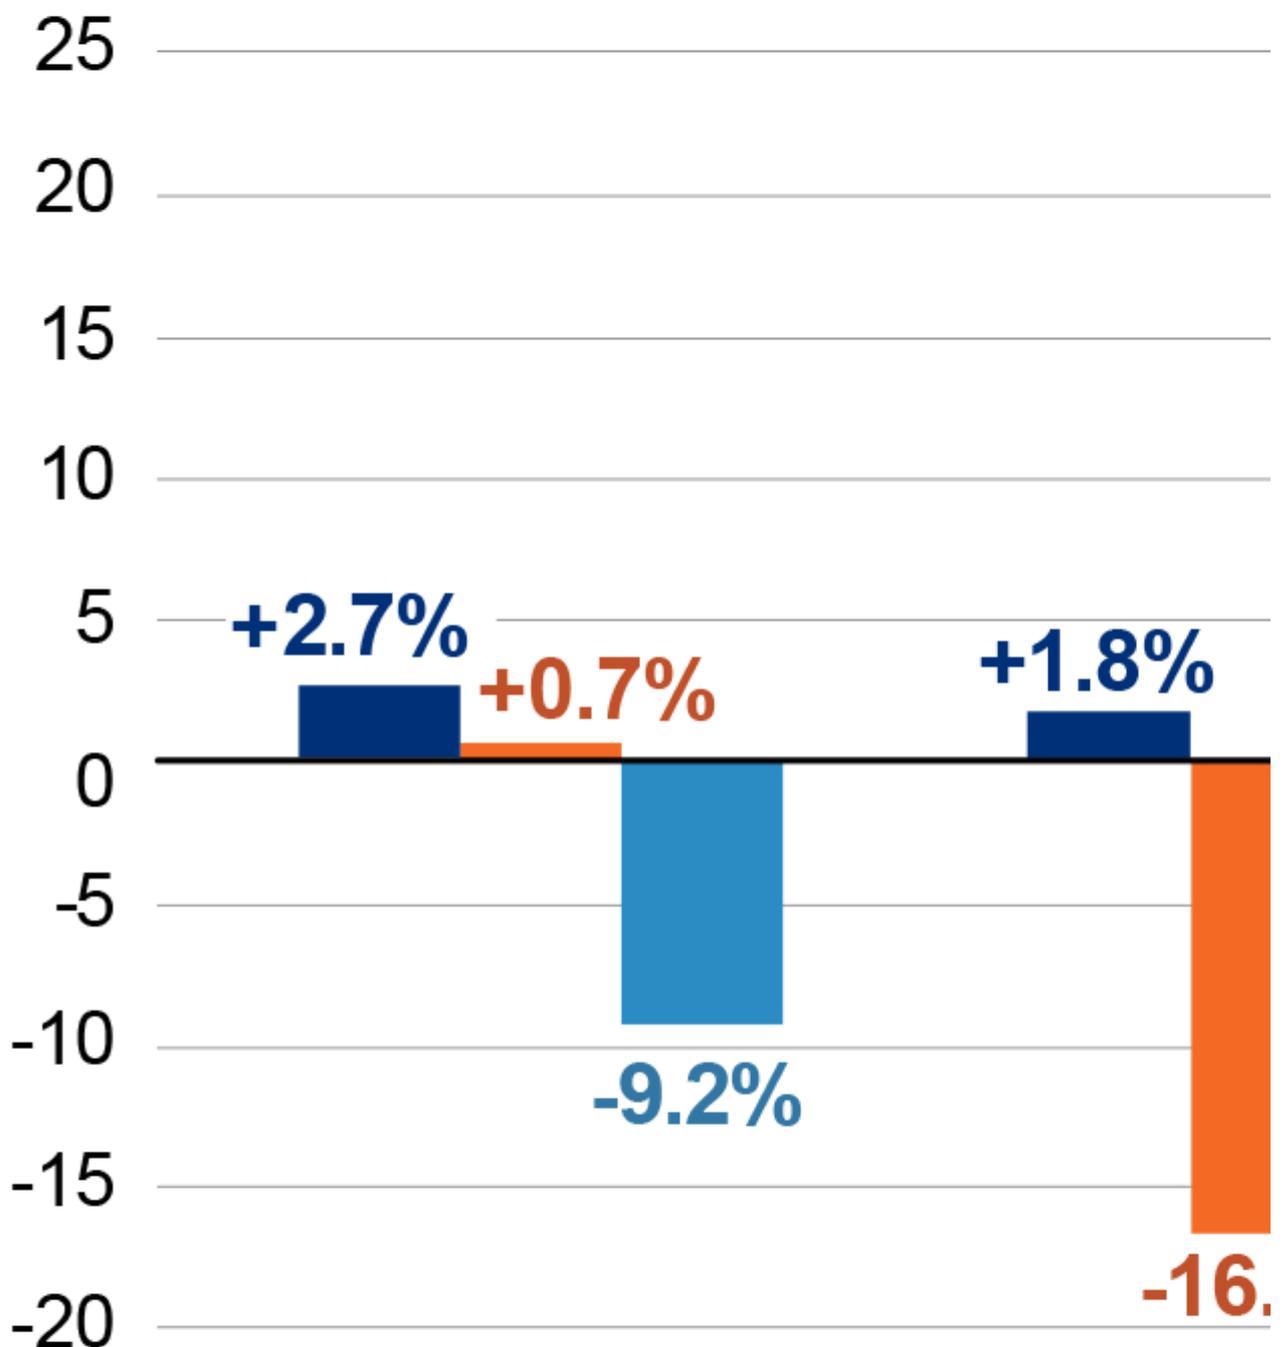

Transportation and warehousing enterprises recorded a 0.6% decrease in turnover, which was the first year-on-year decline in the current year.

Turnover²⁾ of **construction enterprises** in June 2024 dropped by 8.3% year-on-year, thus continuing the downward trend for the tenth consecutive month.

Turnover in **information and communication activities**²⁾ increased year-on-year by 1.7%, which was the second lowest growth rate this year. Despite this, among the monthly monitored sectors of the Slovak economy, only the turnover of this sector remain in positive values for a long time.
