Passenger transport was on the rise, passengers travelling both by urban public transport and trains

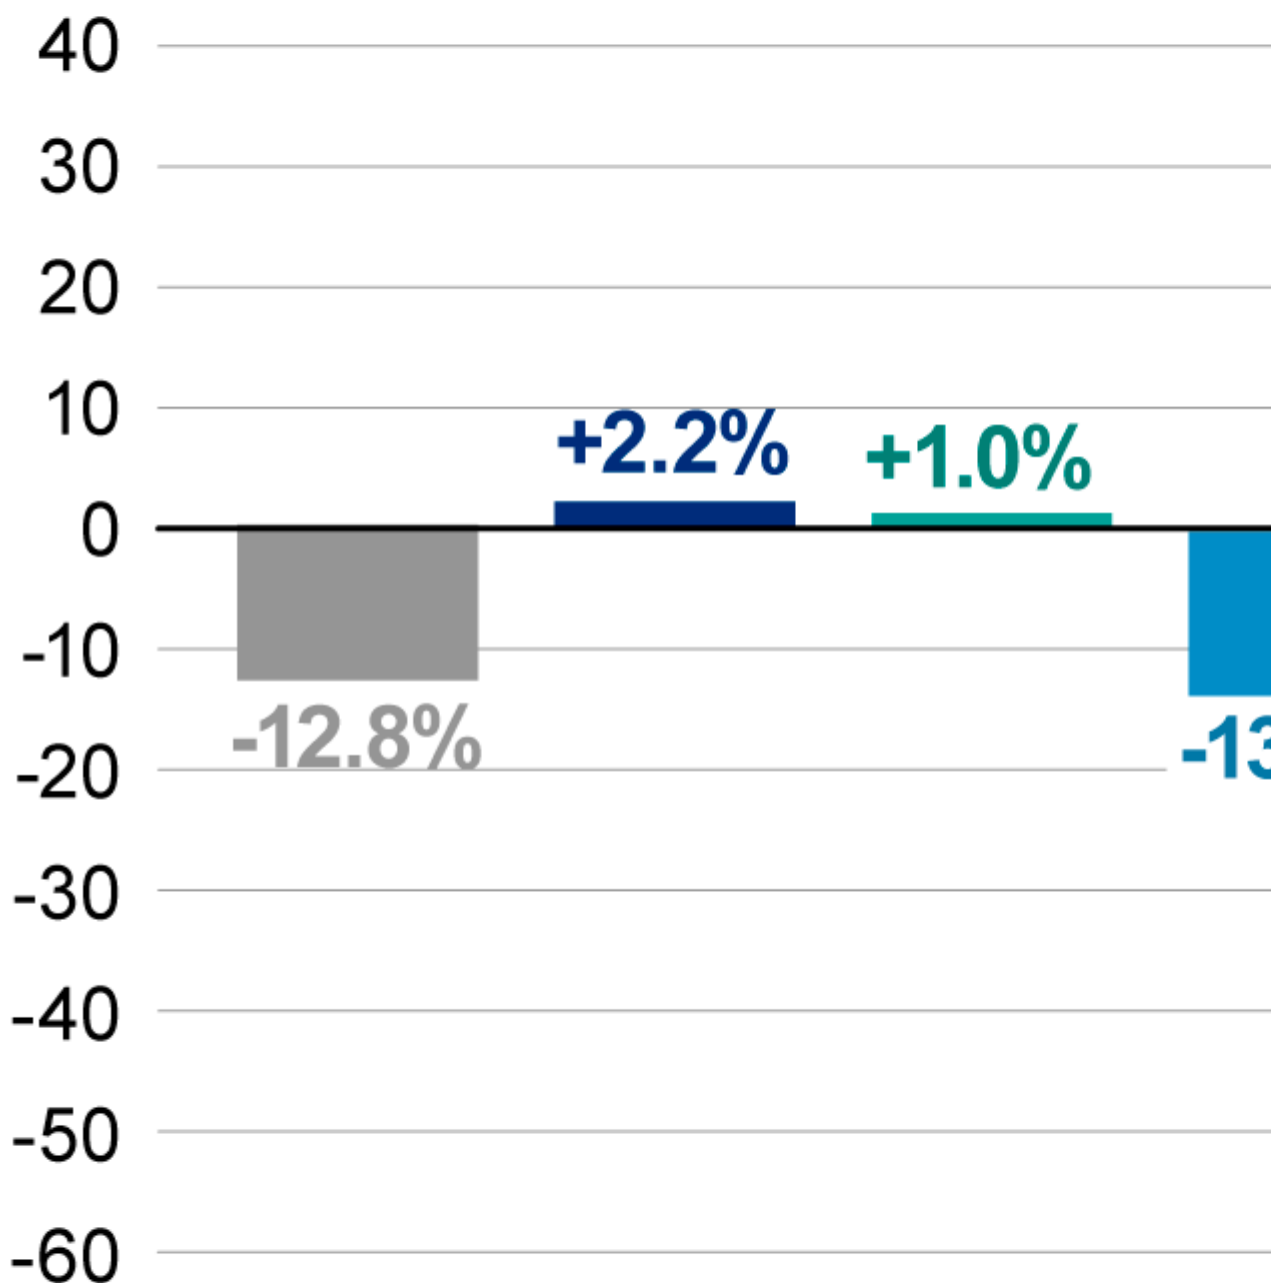

Passenger transport recorded a year-on-year increase of more than 4% in the second quarter, exceeding pre-epidemic values by almost 3%. Urban public transport did well, carrying by a quarter more passengers than in 2019. Freight transport recorded lower volumes of transported goods, but higher transport distances, mainly due to the impact of road transport.

The number of passengers in **passenger transport** increased by 4.1% year-on-year in the 2nd quarter of 2024. The number of passengers carried reached 182.1 million, which was the highest in the last five years. Compared to the pre-pandemic 2nd quarter of 2019, the values were thus higher by 2.7%. The largest item, road transport, recorded year-on-year growth of almost 2%, significantly improving urban public transport. More than 119 million passengers were carried by urban public transport, which was the highest value since 2019. Year-on-year growth was 9.3%. Compared to the pre-pandemic values of 2019, the number of passengers was by more than 25% higher. Railway transport was also on the rise. In the 2nd quarter, 18.9 million passengers were carried by rail transport, which was by 2.1% more year-on-year. The number of passengers carrying by trains was still by a tenth lower than in 2019.
