### **Industrial producer prices for the domestic market and producer prices of agricultural products remained lower than a year ago**

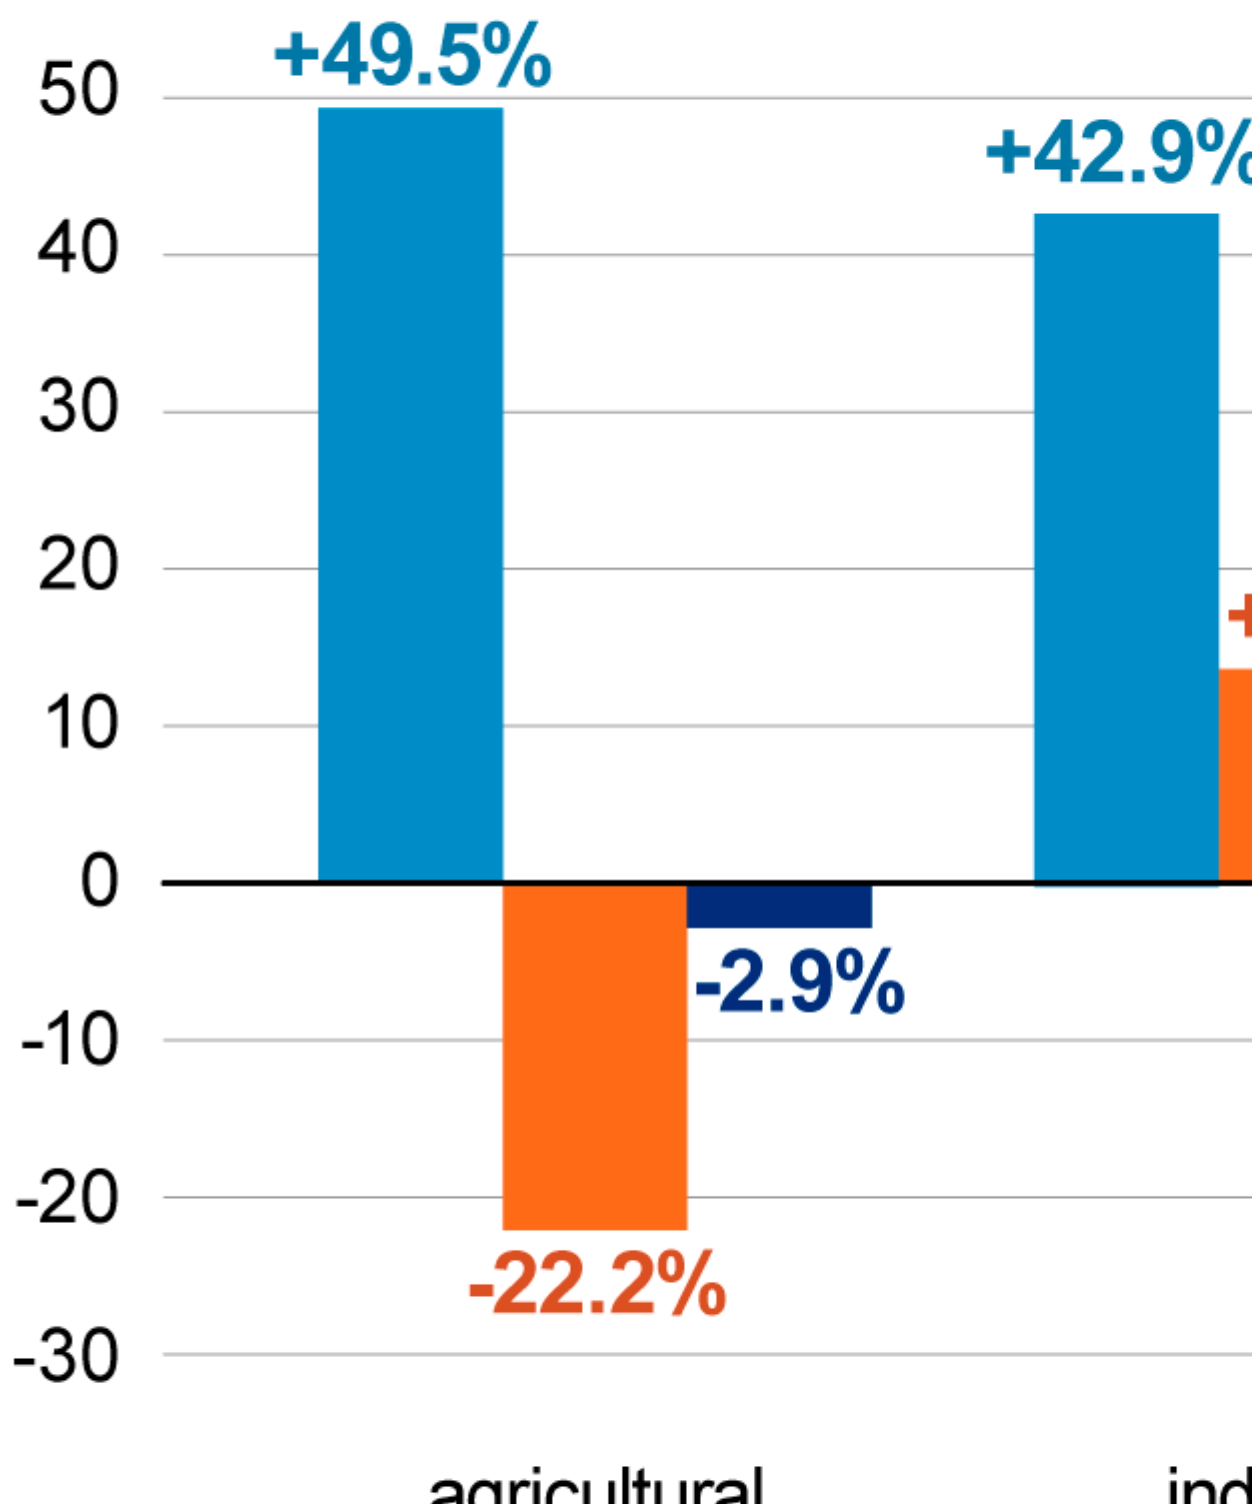

Since the beginning of the year, the decline in industrial producer prices for the domestic market has continued, prices were still lower by more than 9% year-on-year. The overall result was influenced by prices of energy that were lower by a fifth, but also again by a drop in prices in manufacture of transport equipment. Prices of agricultural products were lower than last year, but the decrease was the slowest in the last thirteen months, not exceeding 3%.

**Industrial producer prices for the domestic market** declined by 9.1% year-on-year in July 2024. A 20.7% drop in energy prices contributed to this. Prices were again lower in manufacture of transport equipment by 1.2%, the decline in prices continued in other significant sectors such as manufacture of metal by 3.5% and manufacture of food, beverage and tobacco by 2.6%. The increase in prices was recorded again in water supply by 10%, and also in manufacture of rubber and plastic products by 0.2%. In a month-on-month comparison, prices rose by 1.8%. In total, for the seven months of 2024, industrial producer prices for the domestic market fell by 11.1%.

**Industrial producers for the non-domestic market** were higher by 0.3% year-on-year, they increased by 0.4% month-on-month. In total, for the seven months of 2024, industrial producer prices for the non-domestic market were by 1.6% lower than a year ago.
