Industrial production increased by more than 5%, affected mainly by higher production related to energy and manufacture of motor vehicles

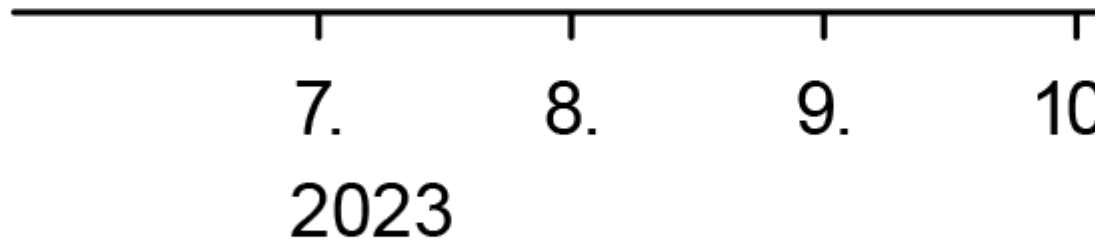

Industrial production recorded the highest growth this year in the first holiday month. A higher volume of production than a year ago was reported by two thirds of the monitored industrial sectors. July's balance was not affected by factory holidays in large enterprises, they were almost similar to the last year's dates.

In July 2024, industrial production¹⁾ of the Slovak Republic increased by 5.4% year-on-year, which was the highest growth since the beginning of the year. The industry was able to deliver a higher performance than a year ago for the third time. In total, 11 of the 15 monitored sectors²⁾ recorded **higher performance** year-on-year, among them almost all the main sectors of Slovak industry. The balance of the first holiday month was not affected by factory holidays, as the dates especially in manufacture of motor vehicles, were almost identical as a year ago.
