[Annex - The third estimate of yield in 2023 \(ZIP - 42 kB\)](#)

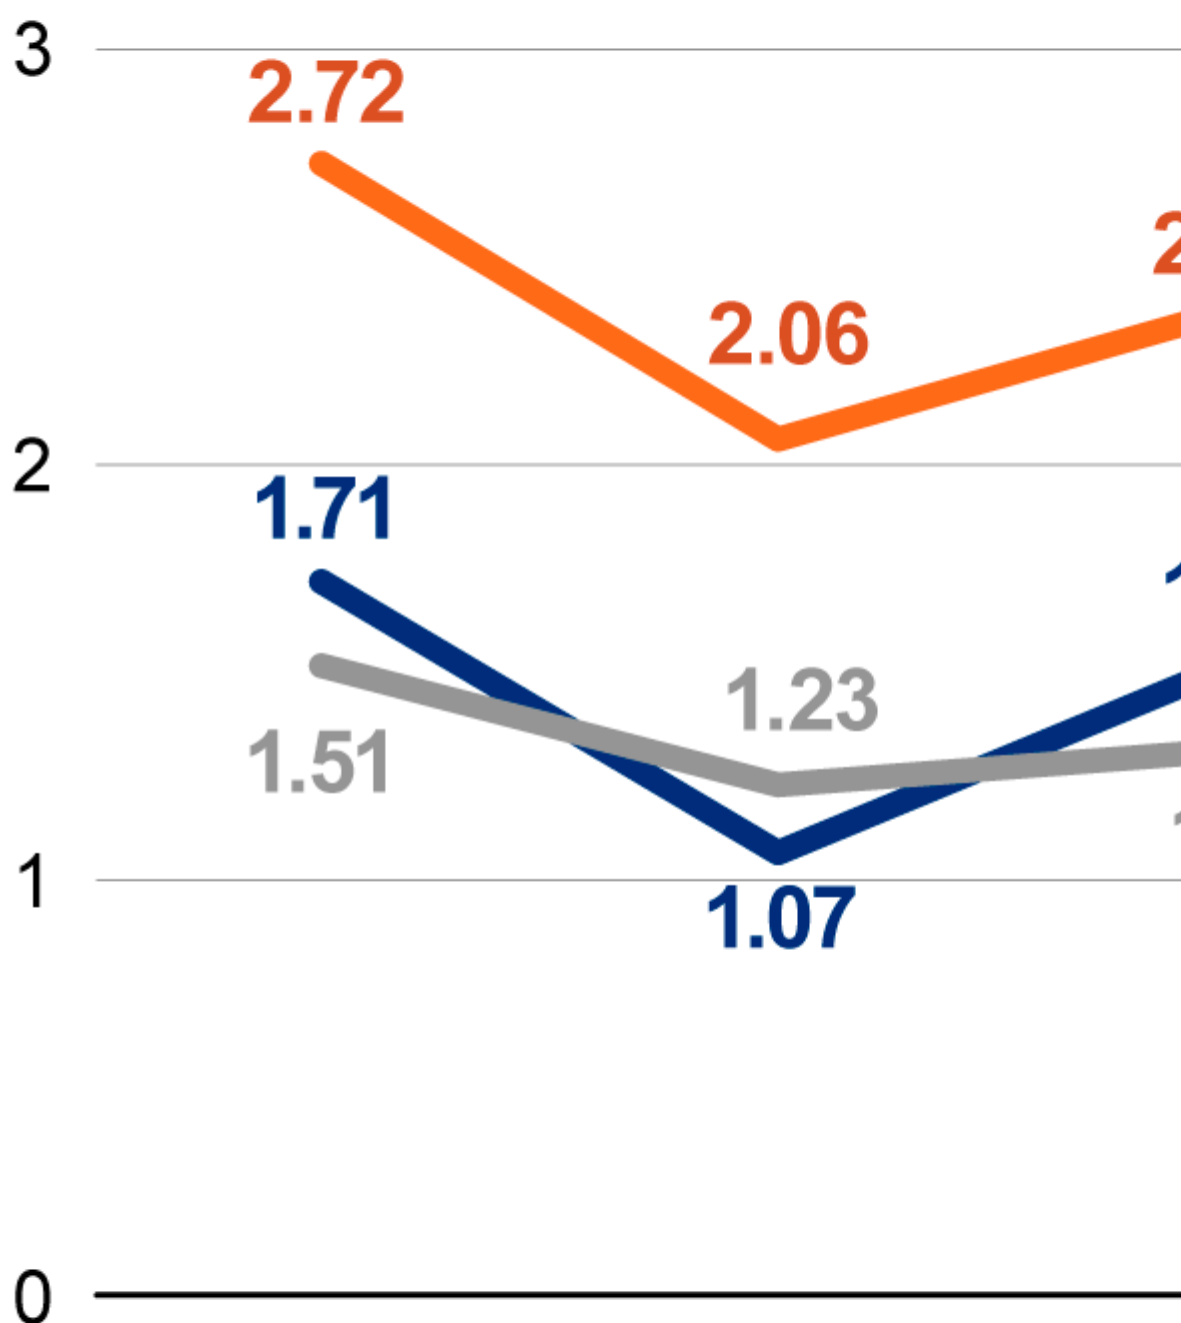

The farmers were satisfied in the summer, they increased the estimate of yield of autumn crops in September

The third adjusted estimate of yield confirmed a significant year-on-year increase in the total production of grain maize, potatoes and sugar beets. After last year's low values, yields per hectare also increased for sunflowers, all autumn crops exceeded the 5-year average.

According to a new estimate, the total production of the second most cultivated crop in Slovakia, **grain maize**, should reach almost 1.07 million tons. Year-on-year, the harvest will increase by 56%, even despite a significant, one-fifth, decrease in the area sown. Farmers have thus slightly increased the predictions of the expected yield of this commodity. The Statistical Office of the SR conducted the third estimate of yield as of 15 September 2023.
