Construction production in June remained in the positive numbers, construction work on civil engineering networks accelerated, on the contrary, building construction slowed down

June's year-on-year growth of total construction production was positively influenced by increasing new construction and by significant increase in civil engineering works. It was mainly negatively affected by the decline in building construction, abroad production also fell.

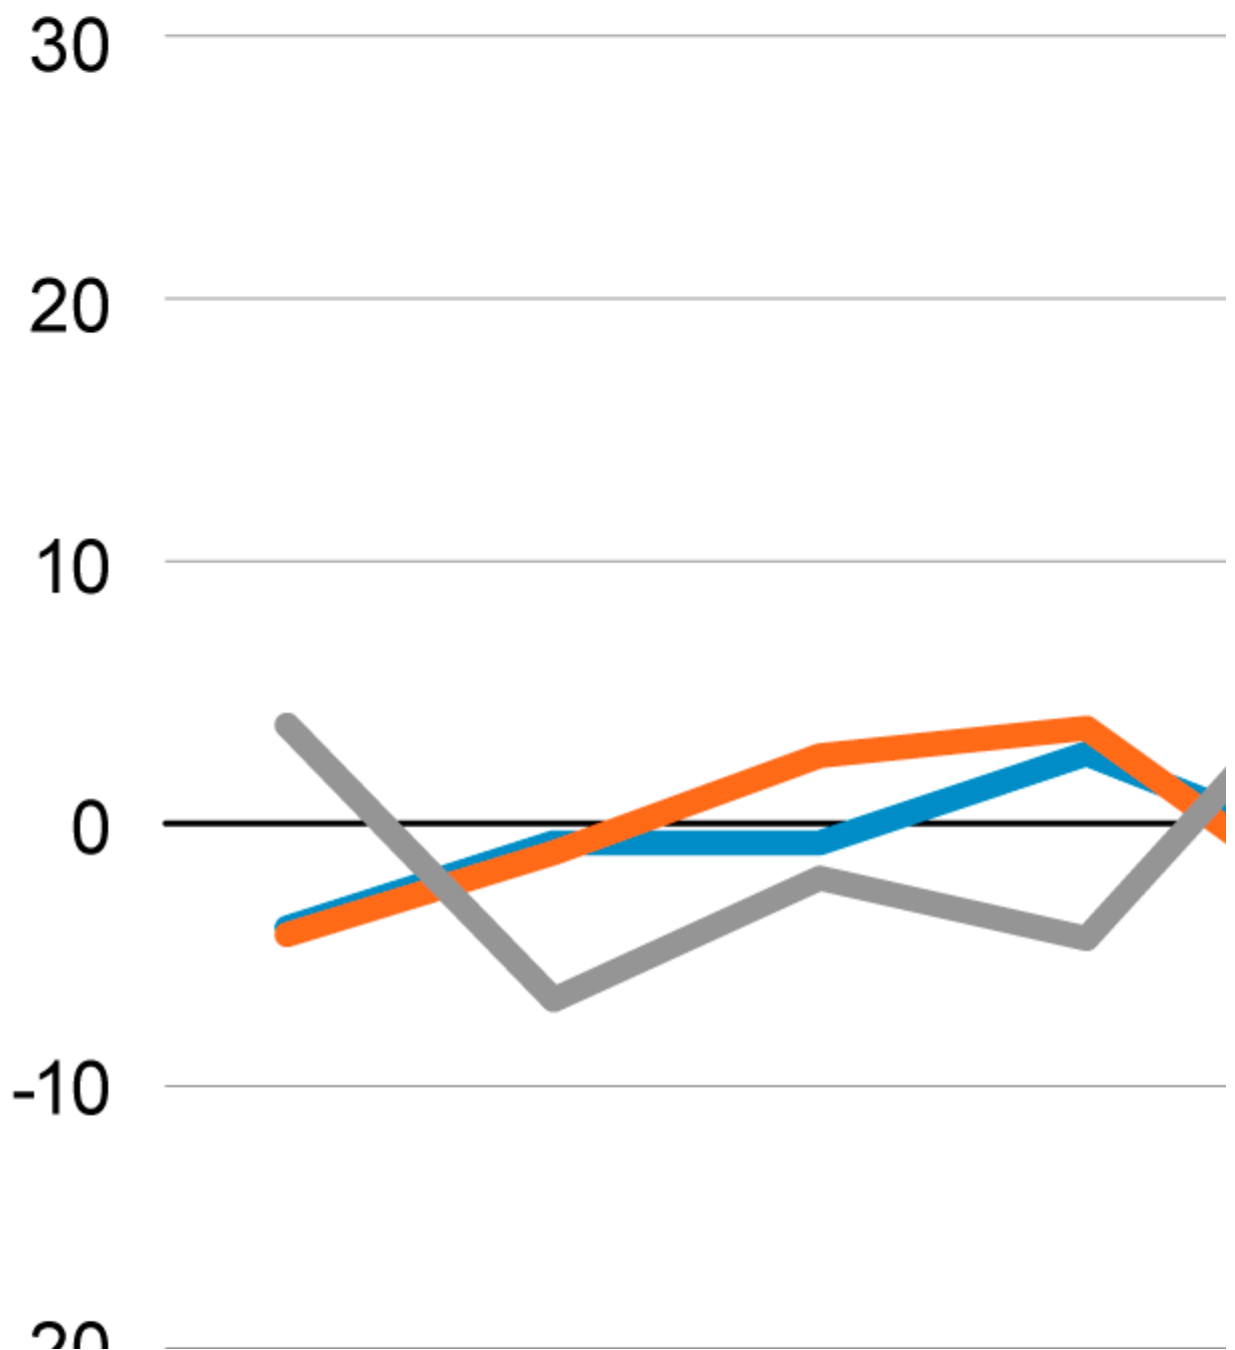

In June 2023, the volume of construction production¹⁾ reached EUR 614.8 million and year-on-year it was higher by 2.3%²⁾. However, seasonal adjustment, construction production³⁾ decreased by 1.5% compared to May 2023.

More than 90% of construction production was realized by construction companies in Slovakia territory. The decisive new construction⁴⁾ rose year-on-year for the second month. Compared to May, its growth rate significantly accelerated and reached up to 9.1% in June. Relatively smaller components of domestic production continued to decline year-on-year. Construction production for repairs and maintenance decreased by 9.8% and for the smallest sector of other works by 6.3%.
