

## Mid-year population

Domain: Demographic and social statistics

Circuit: Population and migration

Last actualization: 01/28/2025

**Term** Mid-year population

---

**Area of use** Population and migration

---

**Definition** The mid-year population reflects the population at the midpoint of the reference period. It is expressed as:  
(a) the mid-year population on 1 July, obtained by means of the demographic balancing method  
Or  
(b) the arithmetic mean of the beginning and end stocks of the populations in the reference period

---

**Source** Statistical Office of the SR

---

**Unit of measure** Person

---

**Method of calculation** a) The number of population on January + the number of live births from 1 January to 30 June - the number of deaths from 1 January to 30 June + the number of immigrants from 1 January to 30 June - the number of emigrants from 1 January to 30 June = the number of population on 1 July  
b)  
(The number of population at the beginning of the period + the number of population at the end of the period) / 2
