Metodické vysvetlivky – regionálne účty

Revízia regionálnych účtov za roky 1995 - 2012 vrátane predbežného ročného účtu za rok 2013

Štatistický úrad SR vykonal v roku 2014 veľkú revíziu údajov v systéme národných účtov s cieľom implementovať Nariadenie Európskeho parlamentu a Rady č. 549/2013 o európskom systéme národných a regionálnych účtov (ESA 2010). Úpravy boli vykonané v príslušných transakciách a ukazovateľoch v celom časovom rade 1995-2012 vrátane predbežných údajov roku 2013. Popis metodických zmien je k dispozícii na [web stránke ŠÚ SR](#).

Vysvetlivky k tabuľkám

Metodika zostavovania regionálneho hrubého domáceho produktu a ukazovateľov z regionálnych účtov je založená na Európskom systéme národných a regionálnych účtov (ESA2010), kapitola 13 Regionálne účty.

Hrubý domáci produkt (HDP) je za účelom európskeho porovnávania vyjadrený v parite kúpnej sily (Purchasing Power Standard - PPS). Parita kúpnej sily berie do úvahy rozdielne úrovne kúpnej sily a nielen výmenné koeficienty medzi národnými menami a Eurom. Základom pre výpočet parity kúpnej sily je Európsky porovnávací program (European Comparison Programme - ECP), na ktorom sa zúčastňujú národné štatistické úrady vrátane ŠÚ SR.

Regionálny hrubý domáci produkt a ukazovatele regionálnych účtov sú zostavené v metodike ESA2010 v súlade s časovým radom národných účtov za roky 1995 - 2013. Poskytovateľom agregátnych údajov za regionálny hrubý domáci produkt a regionálny HDP na obyvateľa v **PKS** je Eurostat (EU 28=100, krajiny patriace do EÚ).

ŠÚSR alokuje agregátne regionálne údaje na odvetvovú úroveň do štruktúry sekcií NACE Rev.2. Regionálna úroveň je stanovená na základe princípov, založených na NUTS (The Nomenclature of territorial units for statistics - Klasifikácia územných jednotiek pre štatistické účely). Úroveň NUTS 2 je v podmienkach SR zoskupenie krajov do **4 regiónov** a NUTS 3 znamená územie **8 krajov**.

Definície

Hrubý domáci produkt v trhových cenách je konečným výsledkom výrobných činností rezidentských výrobných jednotiek vytvorených za bežné účtovné obdobie.

Regionálny hrubý domáci produkt je vypočítaný ako súčet pridaných hodnôt za odvetvia v kraji a daní na produkty znížených o subvencie na produkty ako podiel PH príslušného kraja. Pre medzinárodné porovnania sa regionálny hrubý domáci produkt vyjadruje v parite kúpnej sily. Parita kúpnej sily (Purchasing Power Standard) sa vypočítava na základe cien a objemov predaja tovarov, ktoré sú vzájomne porovnateľné a reprezentatívne pre krajiny zahrnuté do porovnania. Parita kúpnej sily eliminuje efekty rozdielnej cenovej úrovne medzi krajinami.

Regionálny hrubý domáci produkt na obyvateľa je podielom dvoch ukazovateľov založených na rozdielnych princípoch – regionálneho hrubého domáceho produktu (v ktorom sa uplatňuje kritérium zostavovania podľa miesta pracoviska) a priemerného počtu obyvateľstva trvalo bývajúceho v danom regióne (založeného na princípe rezidencie).

Hrubá pridaná hodnota v základných cenách je vypočítaná ako rozdiel medzi produkciou v základných cenách a medzispotrebou v kúpnych cenách. Produkcia pozostáva z produktov vytvorených počas bežného účtovného obdobia a medzispotreba sa skladá z hodnoty výrobkov a služieb spotrebovaných vo výrobnom procese ako vstupy, s vylúčením dlhodobého majetku, ktorého spotreba je zachytená ako spotreba fixného kapitálu. Proces zostavenia **regionálnej hrubej pridanej hodnoty** pozostáva z viacerých krokov. Základný postup spočíva v individuálnom vyčíslení hrubej pridanej hodnoty za odvetvia (sekcie

NACE Rev.2.) v danom kraji (NUTS 3. Využíva sa pritom metóda regionalizácie "zdola - hore" a tzv. "kombinovaná metóda".

Tvorba hrubého fixného kapitálu zahŕňa nadobudnutie dlhodobého majetku zníženého o úbytok (predaj) dlhodobého majetku výrobcami - rezidentmi v priebehu daného obdobia. Dlhodobým majetkom sú hmotné a nehmotné aktíva, ktoré boli vyrobené ako produkcia vo výrobnom procese a budú sa v iných výrobných procesoch používať opakovane alebo trvalo po dobu dlhšiu ako jeden rok. Regionálna tvorba hrubého fixného kapitálu (experimentálny výpočet) je zostavená ako súčet tvorby hrubého fixného kapitálu za odvetvia v kraji. Podobne ako pri hrubej pridanej hodnote sa využíva metóda regionalizácie "zdola - hore" a tzv. "kombinovaná metóda".

Saldo prvotných dôchodkov - čisté prvotné dôchodky charakterizujú schopnosť rezidentských domácností vytvárať dôchodky buď ako podnikatelia nezapísaní v obchodnom registri, zamestnanci, alebo ako príjemcovia dôchodkov z majetku v regióne, v ktorom majú domácnosti trvalé bydlisko, v iných regiónoch v tuzemsku alebo v zahraničí.

Disponibilné dôchodky - čisté disponibilné dôchodky charakterizujú výsledok hlavných transakcií týkajúcich sa sektora domácností (výrobnej činnosti, rozdelenia a znovurozdelenia dôchodkov a ďalších transakcií) medzi jednotlivými regiónmi.

Methodical annotations - Regional Accounts

Revision of regional accounts in the time series of 1995 - 2012 including preliminary annual account for 2013

In 2014, the Statistical Office of the Slovak Republic carried out the major benchmark revision data in the national accounts in order to implement the Regulation of European Parliament and the Council No. 549/2013 on the European system of national and regional accounts (ESA 2010). Adjustments were made to the relevant transactions and indicators in the whole time series 1995-2012, including preliminary data for 2013. Description of methodological changes is available on the [website of the Statistical Office of the Slovak Republic](#).

Legend for tables

The methodology for compiling Regional gross domestic product and indicators of regional accounts is based on the European system of national and regional accounts (ESA2010), chapter 13 Regional Accounts.

Gross domestic product (GDP) for the European comparison purpose is expressed in purchasing power parity (Purchasing Power Standard - PPS). Purchasing power standard takes into account the different levels of purchasing power not only exchange coefficient between the national currency and the euro. The basis for the calculation of purchasing power parity is European comparison program (European Comparison Programme - ECP), where the national statistical offices participate on, including SO SR.

Regional Gross domestic product and Regional Accounts indicators are compiled in ESA2010 methodology in accordance with the time series of national accounts for the years 1995 - 2013. Data provider for aggregate Regional GDP and Regional GDP per capita in PPS is Eurostat (EU 28 = 100 countries belonging to EU).

SOSR allocates aggregated regional data to sector level in the structure of NACE Rev. 2. The regional level is determined on the basis of principles based on the NUTS (Nomenclature of The territorial units for statistics - Classification of Territorial Units for Statistics). NUTS 2 level in SR consists from **four** regions and NUTS 3 area consists from **8** regions.

Definitions

Gross domestic product in market prices is a final result of the production activity of resident producer units created during the current period. Regional GDP is calculated as the sum of values added by industries for each single region, and taxes on products less subsidies on products as a share GVA by region. For international comparison, the Regional Gross domestic product is expressed in purchasing power. Calculation of Purchasing Power Parity (Purchasing Power Standard) is based on prices and sales volumes of goods that are comparable and representative for the countries, which are included in comparison. Purchasing Power Parity eliminates effects of different price levels between countries.

Regional Gross domestic product per capita is a share of two indicators based on different principles - Regional Gross domestic product (in which the criteria by the place of work is considered) and the average number of people residing permanently in the region (based on the principle of residence).

Gross value added at basic prices is calculated as the difference between output at basic prices and intermediate consumption at purchasers' prices. Output consists from products manufactured during the current financial year and intermediate consumption consists of the value of goods and services consumed in the production process as inputs, excluding fixed assets whose consumption is expressed as consumption of fixed capital. The compilation process of **Regional Gross value added** consists of several steps. Basic

approach is based on individual calculation of Gross value added by industry (section NACE Rev.2.) in the single region (NUTS 3). In process of calculation the approach for regionalization is used "bottom - up" and so-called "combined approach".

Gross fixed capital formation includes the acquisition of fixed assets less disposals (sales) of fixed assets by producers - residents during a given period. Included are also increases of the value of certain non-produced assets realized by production activity of institutional units. Fixed assets are tangible as well as intangible assets that have been produced as output in manufacturing process and will be used in other production processes repeatedly or continuously for more than one year. Regional Gross capital formation is constructed as the sum of Gross capital formation by industry in the region. Similarly as in case of GVA the approach for regionalization is used "bottom - up" and so-called "combined approach".

Balance of primary income - net - primary income is characterizing an ability of resident households generate income either as unincorporated enterprises, employees or recipients of property income in the region where households reside or in other regions of the country or outside the country.

Net Disposable income – net disposable income is characterizing the outcome of major transactions relating to the household sector (production activities, distribution and redistribution of income and other transactions) between single regions.
